

Tekuté organické hnojivo – IMPACT ORGANIC UNIVERSAL LIQUID 6-0-0

Unikátny tekutý kompost získaný procesom „vermikulivácie“ – proces spracovania organickej hmoty pomocou dážďoviek.

Obohatený o morské riasy a dusík. Bohatý na humáty,

- stimuluje pôdnu mikrofloru
- bohatý na mikroelementy, rastové regulátory
- zvyšuje dostupnosť živín a efektívnosť ich využitia
- podporuje rast koreňov
- zvyšuje odolnosť rastlín voči patogénom
- ideálny v kombinácii s aerifikáciou na podporu rastu

Balenie : 20 L

Pokrytie z jedného balenia: 5000 m²

Dávkovanie : 40-80 l/ha ,mesačne v IV-V, IX-X

Doba účinnosti : 4-6 týždňov

How does worm composting differ from traditional composting?

Like traditional composting methods, worm composting (sometimes called vermiculture) is a way of recycling food and other organic material into a dark, earthy material called compost that can be used to enrich the soil.

- A unique vermiculture based compost tea rich in natural humates
- Stimulates soil micro-biology
- Increases availability of micronutrients
- Increases root growth
- Addresses inherent Carbon:Nitrogen ratio deficiencies
- Stimulates the plants natural defenses against pathogens

Impact Organic Universal

A unique combination of compost tea ,seaweed extracts and added Nitrogen.

Rich in auxins, cytokinins, humic and fulvic acids.

An ideal turf tonic and plant biostimulant for use in the growing season

6.0.0 Analysis

Pack Size: 20 lt / 200 lt / 1,000 lt

Pack Coverage: 20 lt: 0.51 ha

Application Rate: 40 - 80 lt per hectare

Nitrogen Source: Organic N + Urea

Trace Elements: Mg, Mn, Zn, B, Cu

Approx Longevity: 4 weeks
